The polynucleofides and polypoplides are useful in gene therapy, vaccines or peptide therapy. The polypoptides have various cytokine like activities, e.g. stem cell drowth factor activity, bacmatopolesis regulating

The polynucleotides and polyneptides are useful in gene therapy, vaccines or peptide therapy. The polyneptides have various cytokine like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and may be useful in the diagnosis analog activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a human disrupted in schizophrenia 1 (DIS1) protoin. DIS1 is disrupted by a (1:11)(q42.1:q14.3) translocation which sequenquies with schizophrenia. The NIS1 Tene consists of 13 exces. Exon 11 contains an alternative splice site which removed 66 purifors from the open reading frame. The final intron of DIS1 belongs to the rare AI-AC class of introns. DIS1 polypeptide fragments and antibodies are useful for in fitty diagness of intentifying new drugs for treating psychiatric discretized fragments. SIS1 polypeptides and polynal cyclides are useful for in fitty diagness. SIS1 polypeptides and polynal cyclides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nevel isolated polynucleotide which surrounds a breakpoint on
chromosome 1 inverted in a balanced t(1.11) (q42.1.q14.3)
translocation, and its encoded proteins, useful as medicament for
                                                 Disclosure: Page 39-50:
                                                                                                                                                           translocation, and its encoded proteins, useful as medicament for treating psychiatric disorders -

DISI is disrupted by a (EII)(g42.1:g44.4) translocation which searegates with schizophrenia. The DISI game consists of 13 exchs. Excu II custains an alternative splice site which removed 66 nucleotides from the open reading frame. The final intron of DISI helouss to the rare AT-AC class of introns. DISI polypeptide fragments and antibodies are useful for in vitto diadnosis of a psychiatric disorder. DISI protein is useful in a screening assay for identifying new drugs for

The invention also describes a movel (1) recombinant vector (RVI) containing at least one copy of (1); (2) recombinant vector (RVI) containing the ori of phi-cHi; (3) cert transformed with RVI or RV2; (4) isolated polypoptide (1) encoded by (1); N. magadii cells free from the prophage of phi-cHI; (5) phage pri-cHI and having approximate sequences at least 70 % homelogous with the phi-cHI genome; (6) use of phi-cHI as query transfer vector; and (7) use of halophilic Archaea for production of proteins and other polymers vectors that contain (1) are used to transfer the other polymers specifically N. magadii; (1) are used to transfer the other polymers specifically N. magadii; (1) are used to transfer and other polymers specifically N. magadii; (1) are used for proteins and other polymers (e.g. polyfeydroxybutyrate)). Vectors containing (1) allow controlled inducible expression of compounds in Archaea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel isolated puelele ueld (1) from the denome of phase phiscell of Natrialba magadil The genome of phiscell combination of 48300 and 10198 base pair sequences (S1 and S2), both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid from phase phiChl, used to create vectors for expressing profeins and polymers in balcophilic Archaea -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Σ.

Additionally, (I) supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoletic related diseases, especially cancers and cancer metastases of haematopoletic antiqon genomic to AAK87694 represent human immune/haematopoletic antiqon genomic sequences from the present invention. AAK54942 to AAK84950 and AAM82169 sequences from the present invention. AAK54942 to AAK84950 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             amino acid sequences given in AAM82170 to AAM91921. (1) have expostable activity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    hepatitis: cirrhosis: autoimmune disorder: inflammatory disorder: acquired immune deficiency syndrome; AIDS: allergy; Grave's disease:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human secreted protein (SECP) cDNA #4.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     acidosis and Cushing's syndrome. SECP DNA is useful to create knock-in humanised animals (pigs) of transperie animals (nice or rats) to model human disease. For the apertie of diagnostic purposes, for sematic or germline therapy, to generate hybridisation probes useful in mapping the naturally occurring genemic sequence, and in molecular biological techniques. The present sequence is human SECP cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           andina pertoris, neurological disorders such as stroke, Huntington's disease, Alzhelmer's disease, Pick's disease, epilepsy, dementia, and Parkinson's disease, and developmental disorders such as renal tubulat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and molecules enoughing such protoins. SECP agenist and/or antagenis is useful for treating diseases associated with decreased expression or overexpression of functional SECP. The disorders treated include

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (11). (11) is useful for generating and bodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a lood supplement. (11) and its binding partners are useful in medical imaging of sites expressing (11). (1) and (11) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypurched ide sequences have applications in diagnostics, foreasies, gone mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and are no acid sequences.                                                                                                                                                                                                                                                                                                                                    ulcerative colitis, and disorders associated with cell migration, contact inhibition, tissue interactions, meuronal specificity, restilisation, embryonic cell adhesion, limb bud morphogenesis, mesenchyme development immede researching and provide and glycolipid biosynthesis. One possible method of ulreatment is the use of gene therapy. The degenerate version of this secures is also also also therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                         is a beta-1.3-galactosyltransforase, and is a type II membiane protein involved in cell-cell interactions. The yene is found on human chromosome 1943-2. The yene and protein can be used in the treatment of cancer, particularly motastases, inflammation, autolemonae diseases such

This invention describes a novel isolated nucleic acid (1) from the CC genome of phage phi CH1 of Natrialba magnadi. The groume of phi-CH1 is a CC combination of 48700 and 101948 base pair sequences (S1 and S2), both CC fully defined in the specification. The invention also describes a novel (1) recombinant vector (RV1) containing the ori of phi CH1; (3) cell CC (2) recombinant vector (RV2) (RV1) containing the ori of phi CH1; (3) cell CC (1); N. magadii cells free from the prophage of phi-CH1; (5) phage CC (1); N. magadii cells free from the prophage of phi-CH1; (5) phage CC variants having genomic sequences at least 70 % homologous with the CC phi-CH1 and having genomic sequences at least 70 % homologous with the CC phi-CH1 genome: (6) use of phi-CH1 as gene transfer vector; and (7) use CC vectors that contain (1) are used to transform halphilic Archaea. CC specifically N. magadii, for production of proteins and other polymers. CC cya. pulyflydraxibatylaty. Nectors containing (1) allow controlled, CC induction of proteins and other polymers.
Sequence 48300 BF, 10376 A, 14421 C,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local Similarity 94.4%;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 in the sample. The polypeptides may be used as antiques in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downrequiate expression and activity of P. acnes polypeptides and therefore treat P. acnes intections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immentosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAU4181 42019 and AAU67474.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 07 JUL 2000; 2009US:216747P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S Nov
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnosis of medical conditions caused by P. acnes. The disorders include SADHO syndrome (Synovitis, acros, pustiolsis, byperforts and esteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne is particularly involved in the inflammatory lesions associated with acne
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Propionibacterium aches polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for
